3-Way Threaded Standard Port Ball Valves, 1/4" - 1" For High Pressure Applications

**Instrumentation
Series**

Model 3HP

Flow-Tek's Instrumentation Series 3-Way ball valves offer rugged reliability for high pressure and instrumentation applications. The valves feature three piece bodies designed for flexibility of installation and ease of maintenance. Model 3HP is constructed as standard with 316 stainless steel bodies manufactured to NACE specifications. Other body materials are available such as Duplex SS, Hastelloy, Monel and Titanium. All bodies are marked with a heat code for full material traceability.

A floating ball design provides a positive, bubble tight shut off with smooth quarter

ter turn operation at low operating torque. Additional advantages of the Instrumentation Series include a choice of lever or pointer handles, travel limit stop pins and replaceable seats and seals. Locking kits which secure the valve in a desired position are also available.

Safety features include an internally loaded blow-out proof stem and end connections that are pinned to prevent inadvertent loosening or disassembly.

Actuator Mounting Valves with actuator mounting to ISO 5211 specifications are also available as an option.

Pressure Rating: 6,000 psi

Pinned End Connections

End Connections

Standard: NPT

Optional: Compression
Fittings

Pressure / Temperature

A 2-Way version of the Model 3HP valve is also available. Please see Flow-Tek brochure #HP/HX.

Flow Pattern

Standard Side Entry Flow Diversion

Optional flow patterns are available upon request.

All valves are factory tested under water in the Open and Closed position for bubble tight integrity before shipping. Bodies and seats are additionally tested to the following:

Shell: 9,000 psig
Seat: 1.1 x Rated Pressure
